The voice OS company

We're Stanford University alumni and serial entrepreneurs on a mission to make AI useful, accessible, and magical in everyday work. As product-obsessed builders, we're rethinking how humans interact with technology - starting with one of its most fundamental layers: the keyboard.

Typeless is the smartest AI voice dictation app ever built. Just press, speak, and watch your thoughts turn into beautifully polished text - instantly. Whether you're messaging, writing, or working with AI, Typeless makes it feel effortless - like talking to a close friend.

Less typing. Less friction. More clarity, creativity, and headspace. More human.

We're building a voice-first future for how people live and work.

Company

Simply CA LLC
California, United States

Founded by **Stanford University alumni**.

Backed by StartX (the premier startup accelerator for Stanford students, professors, and alumni).
